Operator Ramp Dashboard

Tracking operational understanding and decision readiness

Dashboard | People | Inputs | Day 14 of 30 | DATA CONFIDENCE: LOW

Day 14: First clear constraint hypothesis formed · Understanding improved from 35% to 50% in last 5 days

Conflicting inputs detected from 3 leaders
Production Manager, Quality Lead, and Plant Manager disagree on bottleneck location

Only 2 floor supervisor interviews completed
Need at least 5 to validate leadership claims

Data confidence: Low
Based on 8 interviews, 12 documents — 47 insights extracted

Critical Focus NEXT 5 DAYS

Resolve production → quality handoff ownership 3d
3 batches stuck in limbo — no clear owner for release decision

Validate bottleneck at final assembly line 5d
Throughput data shows 40% capacity loss — root cause unclear

WHAT BREAKS IF IGNORED

- Shipment delays will compound — customer penalties by Week 4
- WIP inventory buildup erodes working capital
- Margin erosion from inefficiency — CFO escalation likely

Primary Constraint (Working Hypothesis) Medium

Throughput bottleneck at final assembly driven by unclear ownership between Production and Quality during handoff

WHY THIS MATTERS

Delays shipment of finished goods, increases WIP inventory, and impacts revenue recognition and delivery timelines

NEXT VALIDATION STEP

Observe 2 full production cycles and map handoff between Production and Quality leads

Readiness Breakdown

50% overall

Revenue & Margin Drivers	72%
Production Flow Clarity	45%
Role Ownership	38%
Decision Clarity	35%
Constraint Clarity	62%

0-40% · 40-70% · 70-100%

Insights

WHAT'S CLEAR

- Hardware-driven revenue model with direct sales
- Production near capacity on key SKUs
- Quality controls final release to shipping

WHAT'S UNCLEAR

- Ownership of rework decisions
- Production prioritization logic when demand exceeds capacity
- Supplier escalation process for critical materials

CONTRADICTIONS

- Production vs Quality disagreement on bottleneck source
- Supply chain vs Operations mismatch on material availability forecasts

Interview Capture

+ New Interview

RECENT INTERVIEWS (2)

Sarah Walsh — 2 days ago
Production Manager · Production

Production owns throughput targets. Handoff to Quality is informal — no SLA for release sign-off.

Production | Roles

James Okafor — 3 days ago
Supply Chain Lead · Supply Chain

Material availability forecasts updated weekly. Unclear who prioritizes when multiple lines need same SKU.

Production | Decisions

AI Extraction

Automatically processed from inputs

EXTRACTED ROLES

- Production Manager → Owns throughput
- Quality Lead → Controls release
- Supply Chain Manager → Material sourcing
- Plant Manager → Final authority

DETECTED DECISIONS

- Production scheduling → Plant Manager
- Quality release → Quality Lead sign-off
- Material allocation → Supply Chain
- Rework decisions → Unclear owner

IDENTIFIED WORKFLOWS

- Raw Material → Assembly → QC → Packaging → Shipment
- Defect found → Quarantine → Rework → Re-inspect
- Supplier PO → Receiving → Inventory → Production

POTENTIAL ISSUES

- Rework ownership unclear between Production and Quality
- Final inspection bottleneck — single QC station
- Production scheduling conflicts with maintenance windows
- Supplier delays impacting output — no escalation SLA

Insights automatically update the readiness dashboard
